MESOTEN AQUALIGHT

Ingredients

Hyaluronic acid 1%, succinic acid 1.6%, botulinum peptide
(contains 468 amino acids)

Description and effect

Mesoten Aqualight visibly enhances skin tone and radiance through the brightening synergy of succinic acid and a botulinum peptide complex. It delivers a lifting effect, smooths fine lines, and deeply hydrates while promoting regeneration and skin renewal.

Packaging

10 syringes × 2.5 ml

Uniqueness

SR-(Oligopeptide-91 Clostridium Botulinum Polypeptide-1)

This recombinant peptide combines the properties of oligopeptide-91 and SR-Clostridium botulinum, forming a powerful complex of 468 amino acids. This peptide provides an **anti-aging, firming and moisturizing effect**. In combination with hyaluronic and succinic acids, it **improves skin texture, smooths wrinkles** and maintains a **healthy moisture balance**.

Instruction for use

Recommended: 4 procedures at 14-day intervals (extendable per specialist's recommendation)

Application: popular technique (epidermal / dermal). Needle 32G

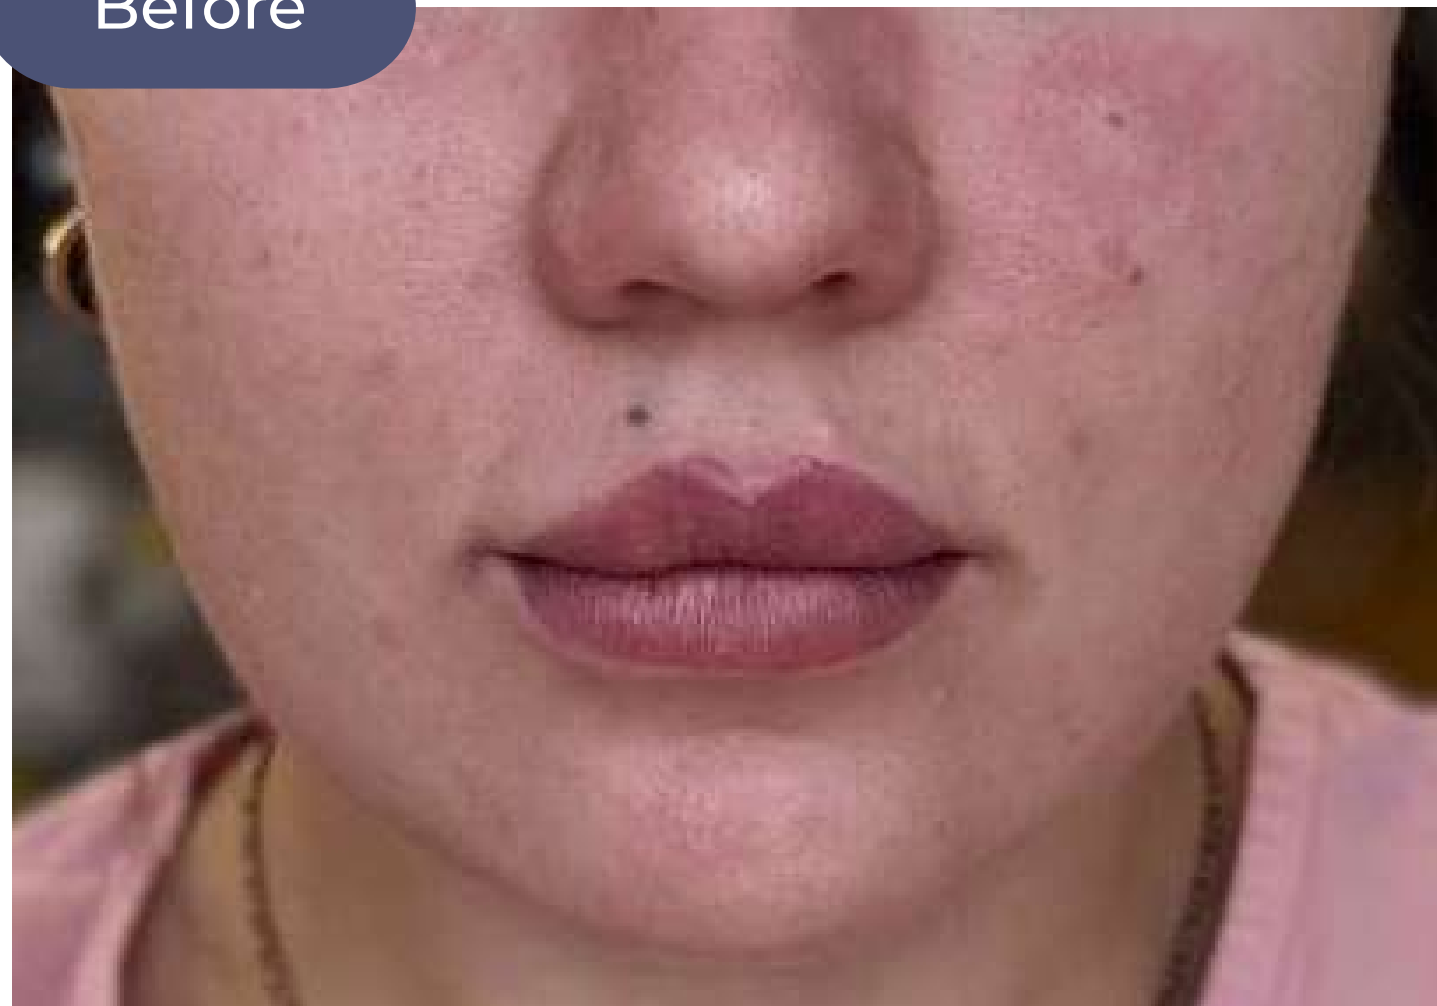

***can be applied using dermapen or other microneedling devices**

MESOTEN PURE SKIN

Ingredients

Angelica Keiskei leaf cell extract, Pyrus Serotina Callus extract, peptide complex (sh- oligopeptide-75, sh- polypeptide-60, 2, 51), complex of 20 amino acids and nucleotides, niacinamide, adenosine, microelements (zinc, copper)

Description and effect

Mesoten Pure Skin is a restorative booster with growth factors and DNA-repairing actives that accelerates recovery after peels, lasers, and other procedures. It reduces inflammation and sensitivity while strengthening the skin barrier with Angelica Keiskei extract, Chinese pear stem cells, niacinamide, and minerals. Helps improve **acne, rosacea, melasma**, and **couperose** by calming redness and balancing pH. Ideal as a **first step in anti-aging protocols** - enhances skin resilience and boosts the effectiveness of biostimulators like *Lennea Booster, Revacoll, and EdalPro*.

Packaging

5 vials × 3 ml

Uniqueness

Angelica Keiskei Leaf Cell Extract & Pyrus Serotina Callus Extract

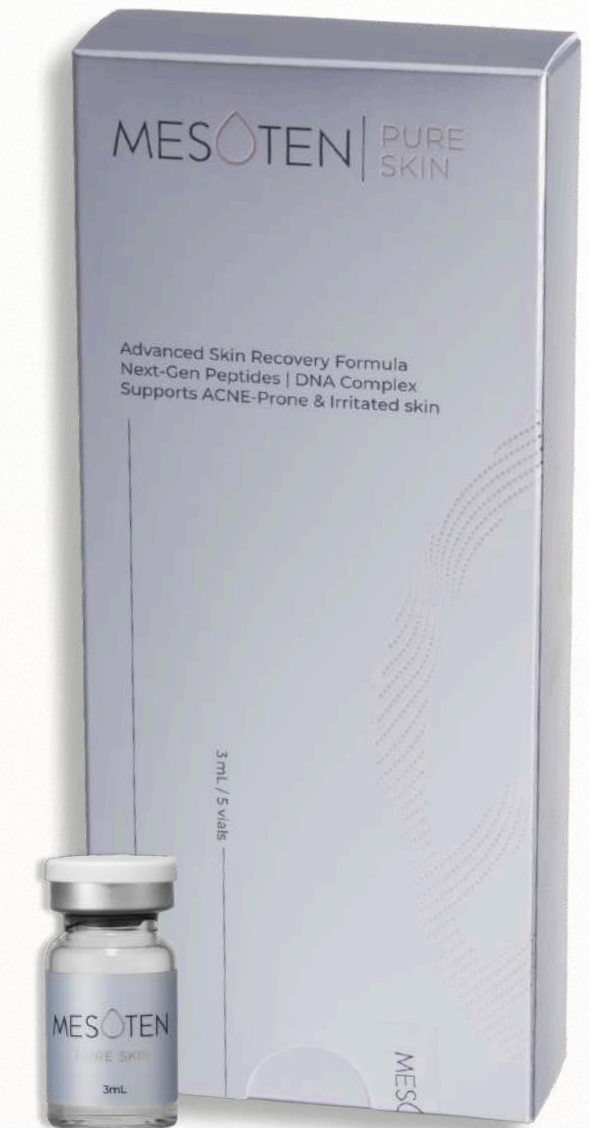

This formula blends Angelica Keiskei, the “longevity herb”, with Pyrus Serotina stem cells to **boost regeneration, calm inflammation, and balance skin pH**. Enhanced with peptides, niacinamide, it strengthens the skin barrier, **accelerates recovery**, and delivers a **visible rejuvenation**, even on sensitive or acne-prone skin.

Instruction for use

Recommended: 3 procedures at 10-day intervals (extendable per specialist’s recommendation)

Application: papular or bolus technique (epidermal / dermal, 90° angle). Needle 30G-32G

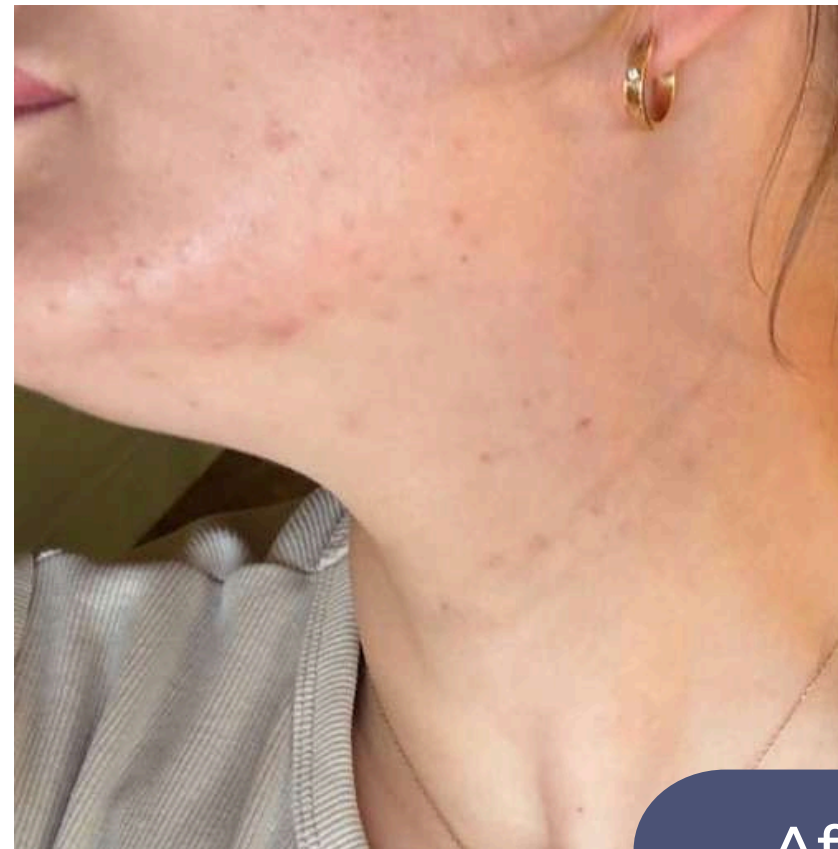

***can be applied using dermapen or other microneedling devices**

MESOTEN EYES

Ingredients

Folic acid, biotin, niacinamide, sh-oligopeptide-1 and sh-polypeptides 11,9,22, zinc sulfate, copper sulfate, hyaluronic acid, PDRN

Description and effect

Specially formulated for the delicate periorbital area, Mesoten Eyes improves microcirculation, reduces puffiness and dark circles, and visibly firms the skin. PDRN and biotin stimulate regeneration and densify thin skin, while growth factors and niacinamide brighten and reduce signs of fatigue

Packaging

5 vials × 2 ml

Uniqueness

Meso-cocktail

This advanced **meso-cocktail** combines **peptides with growth factors, niacinamide, and PDRN** to target the delicate eye area. Peptides boost collagen and **skin repair**, while niacinamide improves microcirculation, **reduces pigmentation**, and strengthens the barrier. PDRN supports deep **tissue regeneration**, and provides a **drainage effect to reduce puffiness**. The result is smoother, firmer, and more refreshed skin around the eyes.

Instruction for use

Recommended: 3 procedures at 10-day intervals (extendable per specialist's recommendation)

Application: popular technique (epidermal / dermal), needle inserted at a right angle. Needle 30G-32G

***can be applied using dermapen or other microneedling devices**

REVACOLL

Ingredients

Hydrolyzed Type 1 Marine Collagen (powder)

Description and effect

Revacoll is a high-purity marine-derived hydrolyzed Type I collagen, optimally absorbed and fully biocompatible with human skin. It enhances hydration, elasticity, and reduces fine lines, delivering visible lifting and dermal restructuring. Rich in bioactive peptides and antioxidants, it also evens skin tone and improves post-acne and scar appearance.

Packaging

5 vials × 100 mg

Uniqueness

Type I Collagen Marine Collagen

Compared to bovine collagen, marine-derived Type I collagen in Revacoll offers **superior biocompatibility with human skin, faster absorption, and higher bioavailability**, making it more effective for visible **skin regeneration and anti-aging results**.

Can be mixed with blood plasma, saline, **Mesoten D, Mesoten H**.

Instruction for use

Recommended: 3 procedures with 2-week intervals + 2 procedures with 1-month intervals

Application: dermis / epidermis. Cannula 25G×50 mm or needle 30G

MESOTEN D & MESOTEN H

Ingredients

DMAE (Dimethylaminoethanol) 1.5%

Packaging

5 vials × 5 ml

Description and effect

Mesoten D is a ready-to-use 1.5% DMAE solution designed to firm and tone the skin with a gentle lifting effect. It improves elasticity, reduces puffiness, and helps restore facial contours. The formula also supports skin hydration and smooths fine lines, leaving the skin refreshed, tighter, and more radiant.

Uniqueness

DMAE is provided in **liquid form**, eliminating the need for reconstitution and allowing the doctor to **begin the procedure immediately**. Thanks to its **high purity**, the injection process is well-tolerated and virtually **painless**. This makes it ideal for sensitive areas and comfortable in aesthetic procedures.

Instruction for use

Recommended: 3-5 procedures at 1-week intervals (extendable per specialist's recommendation)

Application: papular technique (epidermal / dermal) and intramuscularly in levator muscles. Needle 30G-32G

Ingredients

Non-crosslinked Hyaluronic Acid 0.5%

Packaging

5 vials × 5 ml

Description and effect

Mesoten H provides deep hydration and restores skin vitality. It smooths fine lines, improves elasticity, and enhances skin tone and radiance. Ideal for dry, dull, or tired-looking skin, it leaves the complexion plump, fresh, and luminous.

Uniqueness

Mesoten H is ideal for **biorevitalization** treatments, delivering **deep hydration** and skin renewal. It contains 0.5% non-crosslinked hyaluronic acid – an optimal concentration that ensures effective moisture retention **without** causing heaviness or **swelling**.

Instruction for use

Recommended: 3 procedures at 2-week intervals (extendable per specialist's recommendation)

Application: classic biorevitalization - papillary dermis / epidermis. Needle 30G-32G

*can be applied using dermapen or other microneedling devices

REVACOLL + MESOTEN H / MESOTEN D

Ingredients

Hydrolyzed Type 1 Marine Collagen (powder) +
Hyaluronic acid 0.5%

Packaging

5 vials × 5 ml
5 vials × 100 mg

Description and effect

Specially balanced by pH, Mesoten H is designed to complement Revacoll for maximum synergy. This perfect pairing ensures deep hydration, enhances elasticity, and supports natural collagen synthesis. The result - smoother, firmer, and more radiant skin with improved comfort during treatment

Instruction for use

Recommended: 3 procedures with 2-week intervals + 2 procedures with 1-month intervals

Application: Mix Mesoten H + Revacoll into a ready-to-use solution.
Use epidermally or in the dermis with a 30G-32G needle or a 25G×50 mm cannula

Ingredients

Hydrolyzed Type 1 Marine Collagen (powder) +
Dimethylaminoethanol 1.5%

Packaging

5 vials × 5 ml
5 vials × 100 mg

Description and effect

This innovative combination delivers a dual anti-aging effect - Mesoten D acts as a painless diluent for Revacoll while enhancing lifting and skin renewal. Together, they improve firmness and elasticity, reduce fine lines, and refine skin texture for a visibly younger, more even-toned complexion

Instruction for use

Recommended: 3 procedures with 2-week intervals + 2 procedures with 1-month intervals

Application: Mix Mesoten D + Revacoll into a ready-to-use solution. Use on facial ligaments with a 30G-32G needle, or deliver into the dermis using a 25G×50 mm cannula

Uniqueness

The uniqueness of this mix lies in its formulation: all products share the **same pH level**, preventing sediment formation when combined. Thanks to the **high purity** of ingredients, **injections** are smoother and **less painful**. When used **together**, the products provide a synergistic **double effect**, enhancing both **hydration and regeneration**.

LENNEA BOOSTER

Ingredients

Crosslinked hyaluronic acid 11 mg/ml, PDRN 20 mg/ml, glutathione, acetylhexapeptide 8

Description and effect

Lennea Booster supports dermal architecture, boosts elasticity, and enhances skin tone. Glutathione and peptides reduce pigmentation and promote regeneration, while lightly cross-linked HA delivers soft volume and long-lasting skin density restoration.

Packaging

3 vials × 3 ml

Uniqueness

Cross-linked hyaluronic acid + PDRN

Unlike most boosters, Lennea Booster combines **cross-linked hyaluronic acid** with a **high concentration of PDRN**, enhancing the rejuvenating effect by providing deeper hydration and prolonged collagen stimulation at the cellular level. The **cross-linked hyaluronic acid** acts like a **soft filler**, offering a subtle **volumizing effect** that improves skin density and contours temporarily. Although **high doses of PDRN** may sometimes cause skin reactions, the Lennea Booster formula is carefully balanced to minimize irritation while maintaining **maximum efficacy**.

Instruction for use

Recommended: 1 session or 3-4 procedures monthly to consolidate results for up to 1 year

Application: deep dermis / hypodermis (PFC). Cannula 22G or 23G×70 (50) mm, needle 27G

****do not use with papular injection technique***

EDALPRO

Ingredients

High molecular weight hyaluronic acid 40 mg, Low molecular weight hyaluronic acid 40 mg, Succinic Acid and Copper Tripeptide 40 mg

Description and effect

EdalPro combines high- and low-molecular weight hyaluronic acid with copper tripeptide and succinic acid for deep hydration, metabolic boost, and skin restructuring. It refines contours, restores skin density, and delivers immediate radiance with a soft volumizing effect.

Packaging

1 syringe × 2.5 ml

Uniqueness

Fast Glow-Up

EdalPro stands out for its **minimal downtime** and excellent tolerance—there's no swelling, so patients can return to their daily activities immediately after the procedure. It's the perfect choice for a **quick glow-up** before important events: just two sessions within a month deliver visible radiance and revitalization.

Instruction for use

Recommended: 2 procedures with 1-month intervals

Application: dermis / hypodermis (PFC). Cannula 22G or 23G×70 (50) mm, needle 27G

ELASTIFILL

Ingredients

Poly lactic acid PLA (poly-D,L-lactide) 177 mg +
CMC (carboxymethylcellulose) 23 mg (spherical granules)

Description and effect

ElastiFill is a PLA-based stimulator designed to trigger natural collagen synthesis. Thanks to its HMT microspheres, it integrates smoothly and evenly for natural results with long-term effect. Skin becomes firmer, more elastic, and volumized without overcorrection.

Packaging

1 vial × 200 mg

Uniqueness

Elastifill's key advantage lies in its highly effective Poly lactic Acid (PLA) formulation—177 mg of poly-D,L-lactide with a **higher ratio of the L-isomer**, known to be more bioactive and stimulating than the D-form. This enhanced composition makes Elastifill significantly more effective than standard PLA products. Additionally, the product **dissolves** quickly **within 30–90 minutes**, ensuring a smooth, convenient procedure for practitioners.

Instruction for use

Recommended: 2–3 procedures with 1-month intervals

Application: dermis / hypodermis (PFC) / periosteum / above fascia. Cannula 23G×70 mm (50 mm) or 25G×50 mm

MESOTEN EXO PEPTIDE

Ingredients

Panax-EV (Ginseng), Camellia Sinesis Cannus-EV (Green Tea), Soysome-EV (Black beans), peptide complex, amino acids

Description and effect

Mesoten Exo Peptide is an advanced skin booster combining patented exosomes with bioactive peptides for deep regeneration and anti-aging. Its unique dual-phase formula features a dry phase with exosome-peptide fusion and a liquid phase enriched with amino acids. The patented Triple Exosome Complex - stimulates renewal, protects against oxidative stress, and enhances collagen synthesis. Visibly improves skin texture, elasticity, and glow.

Packaging

4 vials × 5 ml

4 vials × 100 mg

Uniqueness

Patented plant-derived exosome complex

With **53 billion exosome particles** in each vial, Mesoten Exopeptide delivers strong **anti-aging results**. We used **patented plant-derived exosomes**, which are safer and more natural for the skin. These exosomes do more than just carry ingredients, they work together with peptides to boost their effect. The formula is gentle and causes **no swelling**, so patients can go back to their daily routine right after the procedure.

Instruction for use

Recommended: 3-4 procedures at 10-14-day intervals (extendable per specialist's recommendation)

Application: Popular technique, 1-3 mm depth depending on area and skin thickness. Needle 30G-32G

***can be applied using dermapen or other microneedling devices**

MESOTEN COMBO DNA F

Ingredients

PDRN+PN 5 mg, niacinamide, glutathione, hyaluronic acid

Description and effect

Comprehensive Skin Regeneration & Radiance. An advanced formula with PDRN and PN that stimulates cellular renewal and boosts collagen synthesis, visibly improving skin elasticity and firmness. Enhanced with glutathione and niacinamide, it evens out skin tone, provides a healthy glow, and strengthens antioxidant protection. Skin becomes denser, deeply hydrated, and visibly rejuvenated, with improved tone and restored barrier function. An ideal choice for global anti-aging protocols and revitalizing dull, tired, or dehydrated skin

Packaging

2 syringes × 2.5 ml

Uniqueness

Combo DNA F and I unite **PN and PDRN** in a synergistic formula that enhances skin regeneration on multiple levels. Their combined action accelerates collagen production and elasticity recovery, delivering faster, deeper rejuvenation results

Instruction for use

Recommended: 3-5 procedures at 10-14-day intervals. Maintenance treatment every 3-6 months

Application: deep papular technique, depth 3-5 mm (2-3 mm for neck), dermis/hypodermis. Needle 30G-32G (4, 6, 12 mm)

*papules may persist for 2-4 days

*can be applied using dermapen or other microneedling devices

New

MESOTEN COMBO DNA I

Ingredients

PDRN+PN 2.2 mg, succinic acid, sh-polypeptide-123, sh-polypeptide-47

Description and effect

Targeted Anti-Age Solution for Delicate Zones. Next-generation formula combining PN, PDRN, and biomimetic peptides to promote intensive regeneration and wrinkle reduction. Succinic acid enhances microcirculation, reduces puffiness, and lightens dark areas. Suitable for: periorcular area, perioral wrinkles and localized aging areas. Perfect for focused anti-aging treatments where precision, potency, and visible results are essential - without overcorrecting or adding bulk

Packaging

1 syringe × 1.1 ml

Uniqueness

Combo DNA F and I unite **PN and PDRN** in a synergistic formula that enhances skin regeneration on multiple levels. Their combined action accelerates collagen production and elasticity recovery, delivering faster, deeper rejuvenation results

Instruction for use

Recommended: 3 procedures at 10-14-day intervals. Maintenance treatment every 3-6 months

Application:

Periorbital area: **Cleopatra mask** micropapular technique (depth 1.5-2 mm), epidermis/dermis (excluding the upper mobile eyelid area).

Needle 33G-34G (1.5mm/2.5mm)

Perioral area: Papular technique (depth 2-3 mm), epidermis/dermis. Needle 30G-32G

***can be applied using dermapen or other microneedling devices**
