

REVACOLL

Embrace the Collagen Revolution

Collagen Overview

Collagen is a fibrous protein characterized by a triple helix structure formed by three α -peptide chains. These chains arrange themselves with glycine, proline, and hydroxyproline in a specific sequence to create Collagen. This vital protein is abundant in various animal tissues, including bones, tendons, cartilage, skin, and other connective tissues, and it serves as a primary component of the extracellular matrix (ECM).

Notably, aquatic animals tend to have higher collagen content compared to their terrestrial counterparts. Collagen contains a wealth of natural moisturizing elements, such as hydroxyproline, hydroxylysine, and glycine. These components contribute to the skin's ability to retain moisture, ultimately leading to effective skin hydration and improved water storage capacity in tissue cells. As a result, Collagen exhibits a notable moisturizing effect on the skin.

What is the Difference Between Revacoll and Other Collagen Products?

Revacoll is Collagen Type 1 derived from aquatic animals. Fish, as an ectothermic organism, possesses a unique collagen structure that sets it apart. Hydrolyzed Fish Collagen stands out due to its remarkable antioxidant capabilities, surpassing those of pig and bovine collagen. Additionally, it boasts a smaller molecular weight compared to collagen derived from other sources. Hydrolyzed Fish Collagen is enriched with various moisturizing elements, including polypeptides and oligopeptides, known for their potent biological activity.

Why should Revacoll be chosen for treatment?

- **Revitalized Complexion:** Revacoll's fish collagen powder provides a natural boost to skin's vitality, promoting a revitalized complexion by diminishing the appearance of fine lines, wrinkles, and signs of aging.
- **Enhanced Hydration:** Infused with hydrating properties, Revacoll helps the skin retain moisture, resulting in a hydrated and supple texture, reducing dryness and promoting a radiant glow.
- **Firmness and Elasticity:** By encouraging the skin's collagen production, Revacoll contributes to improved firmness and elasticity, leading to a more lifted and youthful appearance.
- **Even Skin Tone:** Revacoll's collagen-rich formulation assists in reducing the visibility of scars, blemishes, and uneven skin tones, promoting a smoother and more even complexion.
- **Natural Radiance:** With its bioactive components, Revacoll supports the skin's natural rejuvenation processes, unveiling a natural radiance that enhances your overall beauty.

Benefits of Revacoll

1. **Pure Type I Collagen:** Revacoll consists of Type I collagen, which is the most abundant and fundamental collagen type in human skin. This specific type of collagen closely resembles the collagen found naturally in the skin, making it highly compatible with the body.
2. **Hypoallergenic Nature:** Revacoll collagen is hypoallergenic, which means it has a low risk of causing allergic reactions. This quality makes it suitable for a wide range of skin types, including those with sensitive skin.
3. **Biocompatibility:** Revacoll collagen is highly biocompatible, meaning it seamlessly integrates with the body's own collagen network. This compatibility minimizes the risk of adverse reactions or irritation, promoting a gentle and harmonious interaction with the skin.

Product Details and Cautions

- **Ingredient:** Revacoll consists of Microparticles of type I heterologous collagen derived from aquatic animals.
- **Package Unit:** 100mg x 5 vials
- **Cautions:**
 1. Discontinue use and consult a dermatologist if you experience unlikely side effects like rash, swelling, itching, or irritation. Also, if direct sunlight causes any issues.
 2. Avoid direct eye contact. Do not apply to areas with wounds, eczema, or dermatitis.
- **Storage:** Keep away from children and avoid direct sunlight or extreme temperatures.
- **Usage:** Use immediately after opening.

Treatment with Revacoll

- **Concentration:** 100mg mix with 5ml of saline water
- **Mixing:** Mix until suspension is formed
- Make treatment into the dermis layer or epidermal layer
- **Areas for treatment:** Face, Neck, Decollete, Hands

Interval

1. Recommended additional treatment after 1 month
2. Next additional treatment after 6 months to maintain skin condition

Note: **Consult with a dermatologist or practitioner for personalized guidance regarding your treatment schedule.*

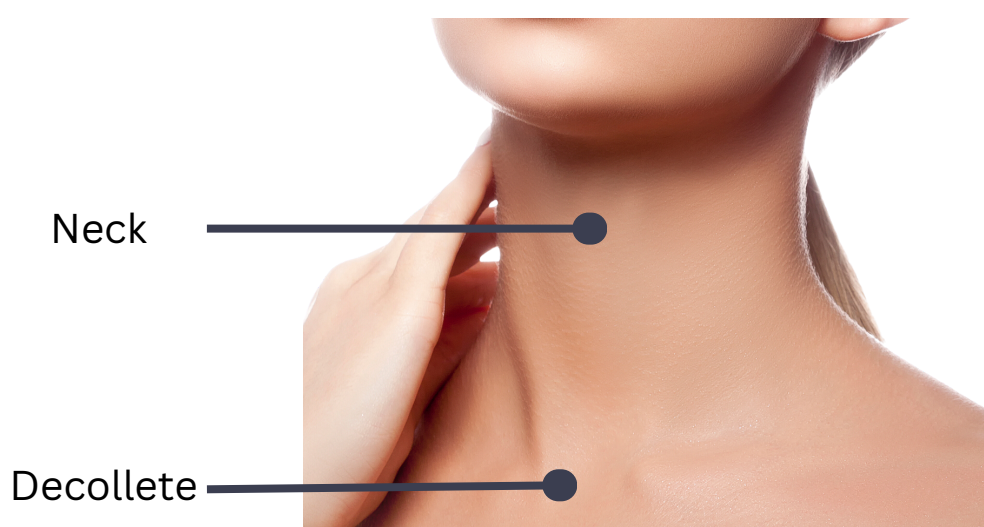

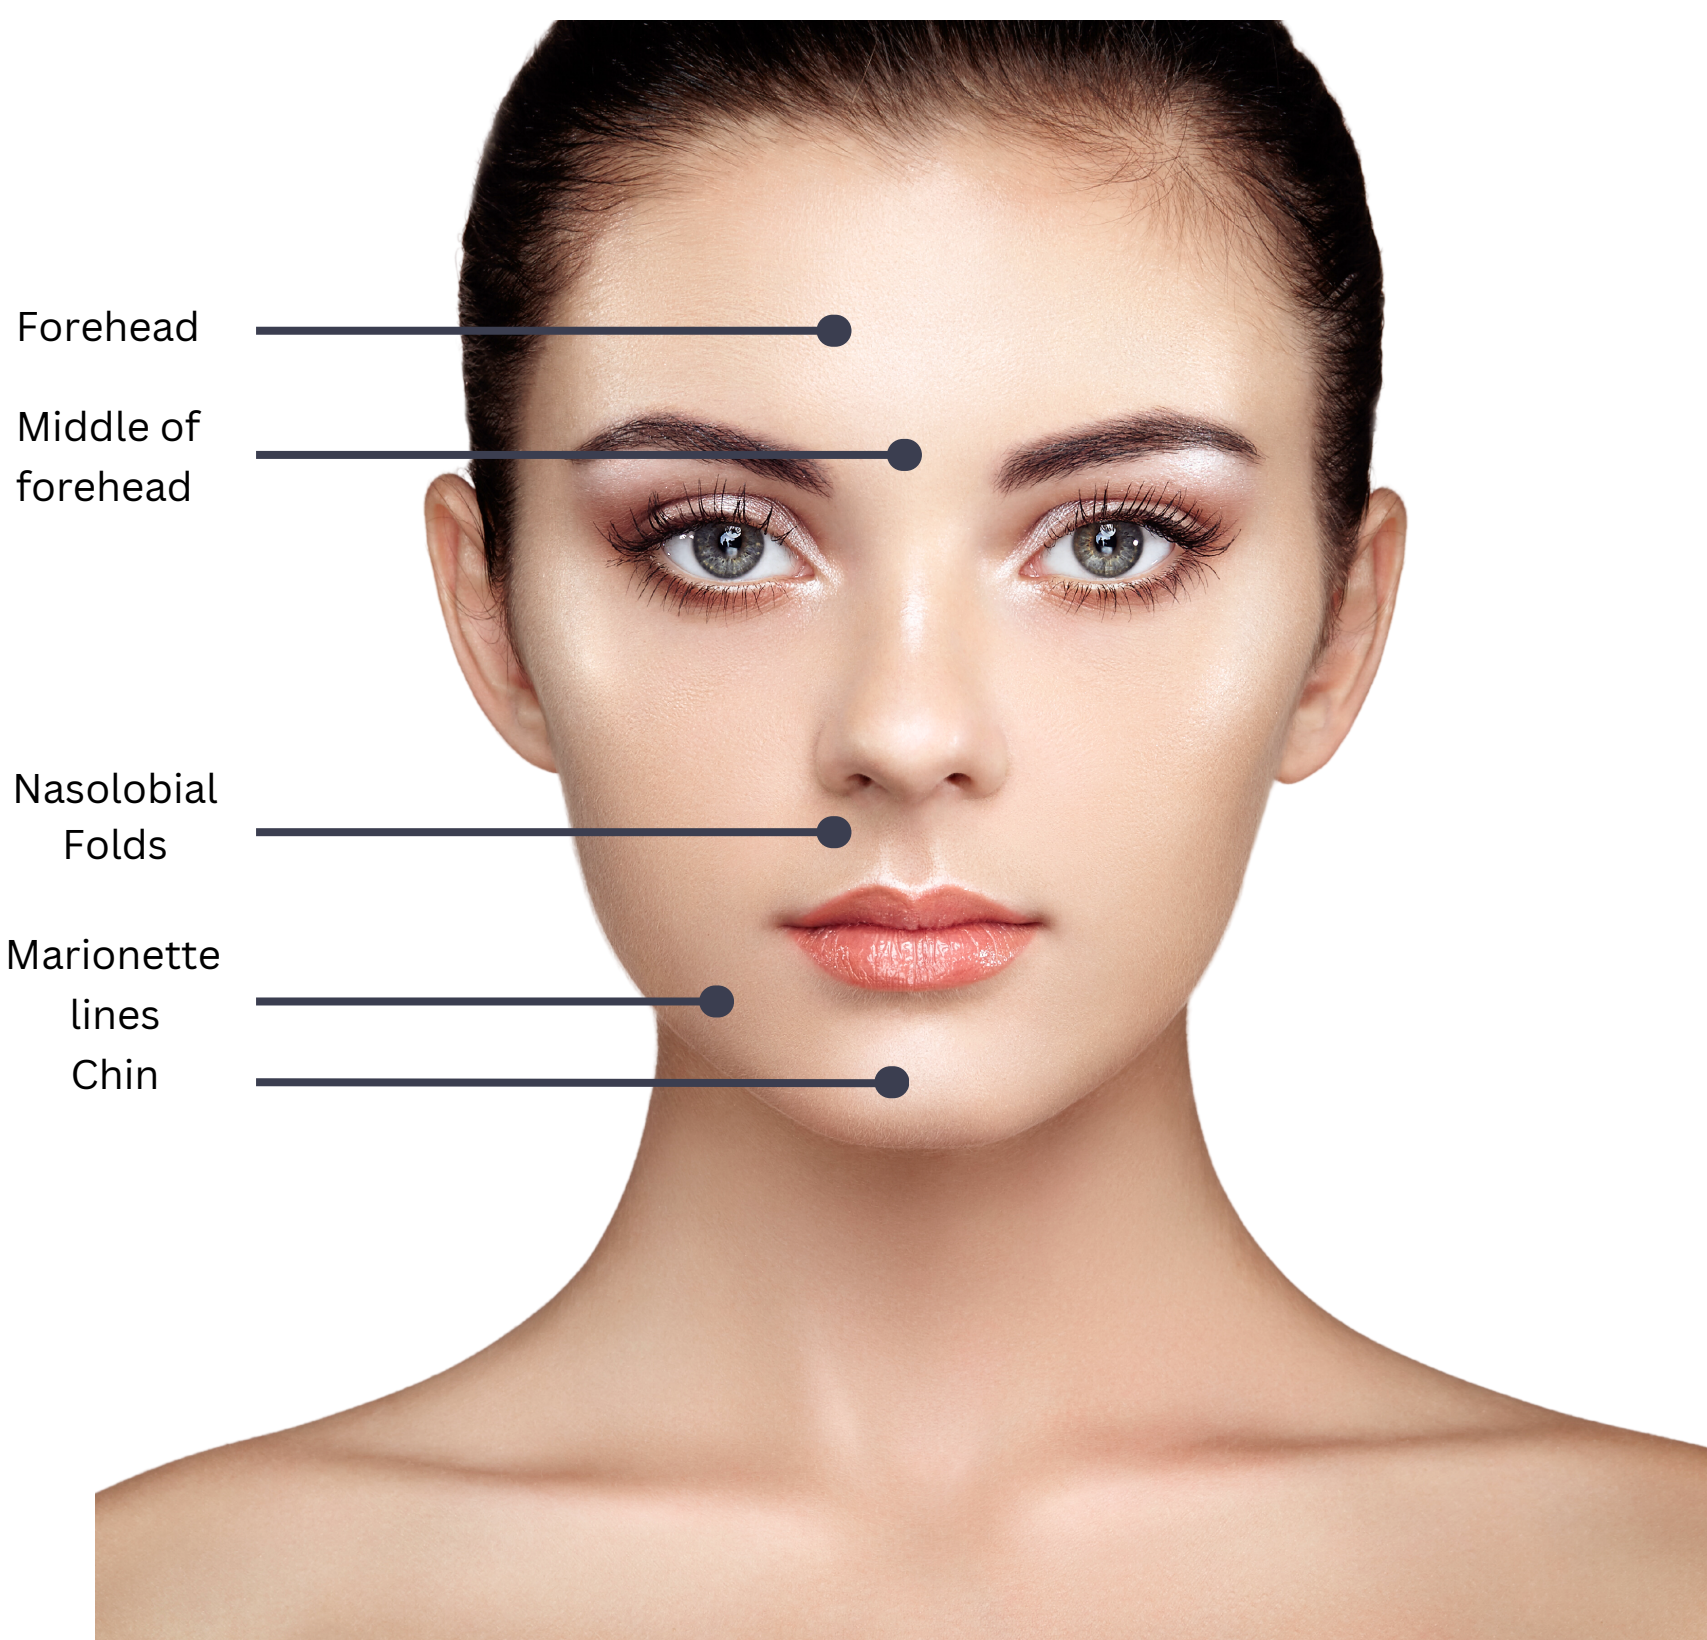

Prohibitions

Revacoll should not be used in cases of:

- 1. Diabetes
- 2. Pregnancy
- 3. Autoimmune diseases
- 4. Ongoing inflammation
- 5. Anticoagulant therapy
- 6. Specific dermatological skin issues
- 7. Certain heart conditions
- 8. Acute herpetic infection and active viral infections
- 9. Active oncology disease or oncology disease in remission

**Consultation with a healthcare professional is advised before Revacoll treatment.*
